Select Specialized Training

This advanced course prepares law enforcement and public safety professionals to integrate drones into tactical missions following national standards developed through LEDA and NTOA. Training covers mission planning, tactical strategies and techniques, and equipment selection, with focused instruction for interior and confined-space operations and hands-on flight exercises. Participants gain the skills to safely deploy UAS in complex, high-risk environments to enhance situational awareness, reduce risk to personnel, and support successful outcomes.

**Instructors:**

RTS instructors are full-time public safety practitioners with extensive experience in high-risk tactical operations, several of whom are assigned to tactical units providing dedicated tactical drone support. Their background includes advanced tactical entries, close-quarters environments, and complex multi-agency missions, bringing real-world strategies to enhance safety, coordination, and decision-making. The team focuses on delivering practical skills and actionable techniques that agencies can confidently integrate into their operations.
